01 Executive Summary

SchemeMatch is an intelligent, conflict-aware scholarship optimization platform designed for Indian students, with deep focus on **Tamil Nadu state schemes**. Unlike existing portals that simply list schemes, SchemeMatch solves the critical "conflict trap" problem.

WHAT OTHERS DO	WHAT SCHEMEMATCH DOES
Dump a flat list of "everything you qualify for"	Outputs the **mathematically optimal, legally valid combination**
Ignore mutual exclusivity rules	Enforces real government conflict rules (NSP "one benefit per fee line")
Require complex form navigation	Accepts **natural language input** ("I'm a girl, BC, B.Tech, 1.5 LPA")
Break when APIs go down	Works **100% offline** with zero-latency client-side engine

> 💡 **One-liner: SchemeMatch bridges the last-mile gap between Tamil Nadu's welfare budget and the deserving student's bank account — turning bureaucratic chaos into a single, conflict-free click.**

30+	<50ms	₹62K	100%
SCHEMES AUDITED	EVALUATION TIME	SAMPLE ANNUAL AID	OFFLINE CAPABLE

02 Problem Statement — The Crisis

> ₹1,200+ Crores in state and central scholarships go **unclaimed or rejected** every single year — not because students don't want them, but because navigating government portals feels like preparing for the civil services exam.

The Three Critical Roadblocks

🔀 Roadblock 1: Overlap & Rule Sprawl

Tamil Nadu alone runs **15+ welfare and scholarship schemes** spanning Adi Dravidar & Tribal Welfare (SC/ST), BC/MBC/DNC Welfare, Pudhumai Penn, 7.5% Govt School Quota, Post-Matric Scholarships, AICTE Pragati/Saksham, Construction Workers Welfare Board, and Differently Abled Persons Welfare. Each has **hyper-specific thresholds** across community, income, gender, disability, schooling, degree, and first-generation status.

📄 Roadblock 2: Information Overload

A student **cannot read 15 separate 40-page government gazette orders** to know what they qualify for. There is no single unified source of truth that aggregates all scheme criteria in a digestible format.

⚠️ Roadblock 3: The "Conflict Trap" (The Biggest Problem)

Government rules strictly state: **You cannot draw maintenance allowance from two overlapping state schemes simultaneously.**

- If a student applies to **both**, **both get rejected** for "double-dipping"
- Or they pick a **₹4,000 scheme** when they were legally entitled to a **₹40,000 bundle**

> *A list of schemes is NOT a solution. Students need an **optimal, legally valid decision engine**.*

03 Solution Overview

SchemeMatch acts as an **automated algorithmic scholarship counselor** with three core capabilities:

🤖 Zero-Barrier AI Profiling

Student types in natural language → AI extracts all parameters instantly. No complex dropdowns needed.

Example: "I'm a girl from a TN govt school, doing 1st year B.Tech, family income 1.2 LPA, BC"

📋 Comprehensive Scheme Catalog

30+ meticulously audited Tamil Nadu + National schemes with exact departmental criteria, verified against official portals.

⚡ Conflict-Aware Decision Engine (Core Innovation)

Evaluates mutual exclusivity rules and outputs the **Maximum-Yield Valid Combination** — not a flat list, but the mathematically optimal bundle.

What the Student Receives

OUTPUT	EXAMPLE
✅ Total Guaranteed Financial Aid	₹62,000/year
✅ Exact Valid Scheme Bundle	Pudhumai Penn + 7.5% Quota (conflict-free)
✅ Step-by-Step Application Roadmap	Documents needed, portal links, deadlines
⚠️ Why schemes were excluded	"Can't combine with X — both cover same fee benefit"

04 Key Features Deep Dive

4.1 🏠 Personalized Dashboard

- **Live match count** and **benefit potential** calculated from user profile
- **Top 3 eligible schemes** widget with score percentages
- **Deadline urgency tracker** with color-coded warnings (red/orange/green)
- Trending topics and education news feed
- Scholarship calculator teaser
- **Application checklist progress** — 5-step pipeline tracking

4.2 ✅ Eligibility Checker

- **9-field comprehensive form**: Name, Age, Gender, State, Category, Income, Education, Marks, Stream
- **"Fill Form with AI" button** — natural language profile extraction
- Results split into: ✅ **Fully Eligible** | ⚠️ **Partially Eligible** | ❌ **Not Eligible**
- Each result shows **exact reasons** with ✓/⚠/ℹ indicators
- **Best-Fit Recommendation** panel showing the optimal conflict-free combination

4.3 💬 AI Chat Assistant

A sophisticated **pattern-matched + LLM-augmented** assistant that handles:

USER INPUT PATTERN	RESPONSE
Self-description ("I'm OBC, BTech, 1.5L")	Auto-parse → run eligibility → show scheme cards
Specific scheme query ("Tell me about NSP")	Scheme detail card + apply steps
Document queries ("How to get income certificate?")	Step-by-step document guide
Multiple scholarship questions	Conflict explanation + what-if analysis
Exam queries (JEE/NEET/CUET)	Preparation guide

4.4 📚 All Schemes Browser

Filterable grid with 10+ categories: All, Scholarships, Fellowships, Grants, Girls, Minority, Technical, Research, North-East, Differently-Abled. Shows **live match percentage** per card with professional vector SVG icons.

4.5 📊 Application Tracker (Kanban Board)

A full **5-stage Kanban board** for tracking scholarship applications:

```
Discovered → Documents Ready → Applied on Portal → College Verified → Disbursed (DBT)
```

- Per-scheme tracking with deadline dates and **Application ID / Token vault**
- Direct portal links for each tracked scheme
- **.ics calendar export** — exports all deadlines as calendar events
- Entirely localStorage-backed (works offline, no account needed)

4.6 Other Features

📅 **Deadline Tracker** — 6+ deadlines with urgency colors

🏛️ **Scholarship Calculator** — Annual + total degree estimate

📰 **Education News Feed** — Latest MoE/NTA/UGC news

🏫 **College Comparator** — IITs, NITs, CUs, Medical, IIMs

📝 **Exam Calendar** — JEE, NEET, CUET, GATE, NET, CAT

👤 **Auth + Profile Sync** — JWT + bcrypt + cross-device

05 The Secret Sauce — Conflict Engine & MWIS Algorithm

5.1 The Computer Science Problem

> *Matching overlapping, mutually exclusive schemes is a **Maximum Weight Independent Set (MWIS) problem on a conflict graph**.*

Conflict Graph Model

- **Nodes** = Eligible schemes (weighted by annual financial benefit in ₹)
- **Edges** = Mutual exclusivity constraints (can't claim both)
- **Goal** = Find the subset with **maximum total weight** and **no two connected nodes**

5.2 Two Conflict Mechanisms

Mechanism 1: `exclusiveGroup`

At most **ONE scheme per group** may be selected:

GROUP ID	MEANING	REAL-WORLD BASIS
`tn-fee-reimbursement`	Schemes paying/waiving same tuition fee	NSP "One Student, One Scholarship"
`tn-welfare-grant`	Welfare-board grants by parent status	Can't stack welfare grants
`tn-merit-cash`	Standalone merit cash awards	One merit award allowed
`central-maintenance-allowance`	Central govt maintenance allowances	NSP dual-maintenance ban

Mechanism 2: `conflictsWith`

Explicit pairwise overrides for special cross-group conflicts using scheme IDs.

5.3 The Algorithm — Dual Strategy

For n ≤ 20 schemes: Exact Bitmask Brute Force

```
function maxWeightIndependentSet(schemes, weightOf) {
  const masks = buildConflictMasks(schemes);  // O(1) validity checks
  for (let mask = 0; mask < (1 << n); mask++) {
    // Enumerate all 2^n subsets
    // Check if no two selected items conflict
    // Track the subset with maximum total ₹ value
  }
}
```

Complexity: $O(2^n \times n)$ — fine for n ≤ 20 (≈ 1M iterations, < 50ms)

For n > 20: Greedy Fallback

Pick highest-value item per exclusiveGroup → remove cross-group conflictsWith violations.

5.4 Compatibility Rules Layer

STATUS	MEANING
ALLOWED	Explicitly confirmed combinable (manual rule with source citation)
NOT_ALLOWED	Same exclusiveGroup or explicit conflictsWith
CONDITIONAL	Allowed only if a stated condition holds
UNKNOWN	Not individually verified — flagged to user

5.5 Sample Output for Student

🏆 Best-Fit Recommendation

Optimal Combination: ₹62,000/year

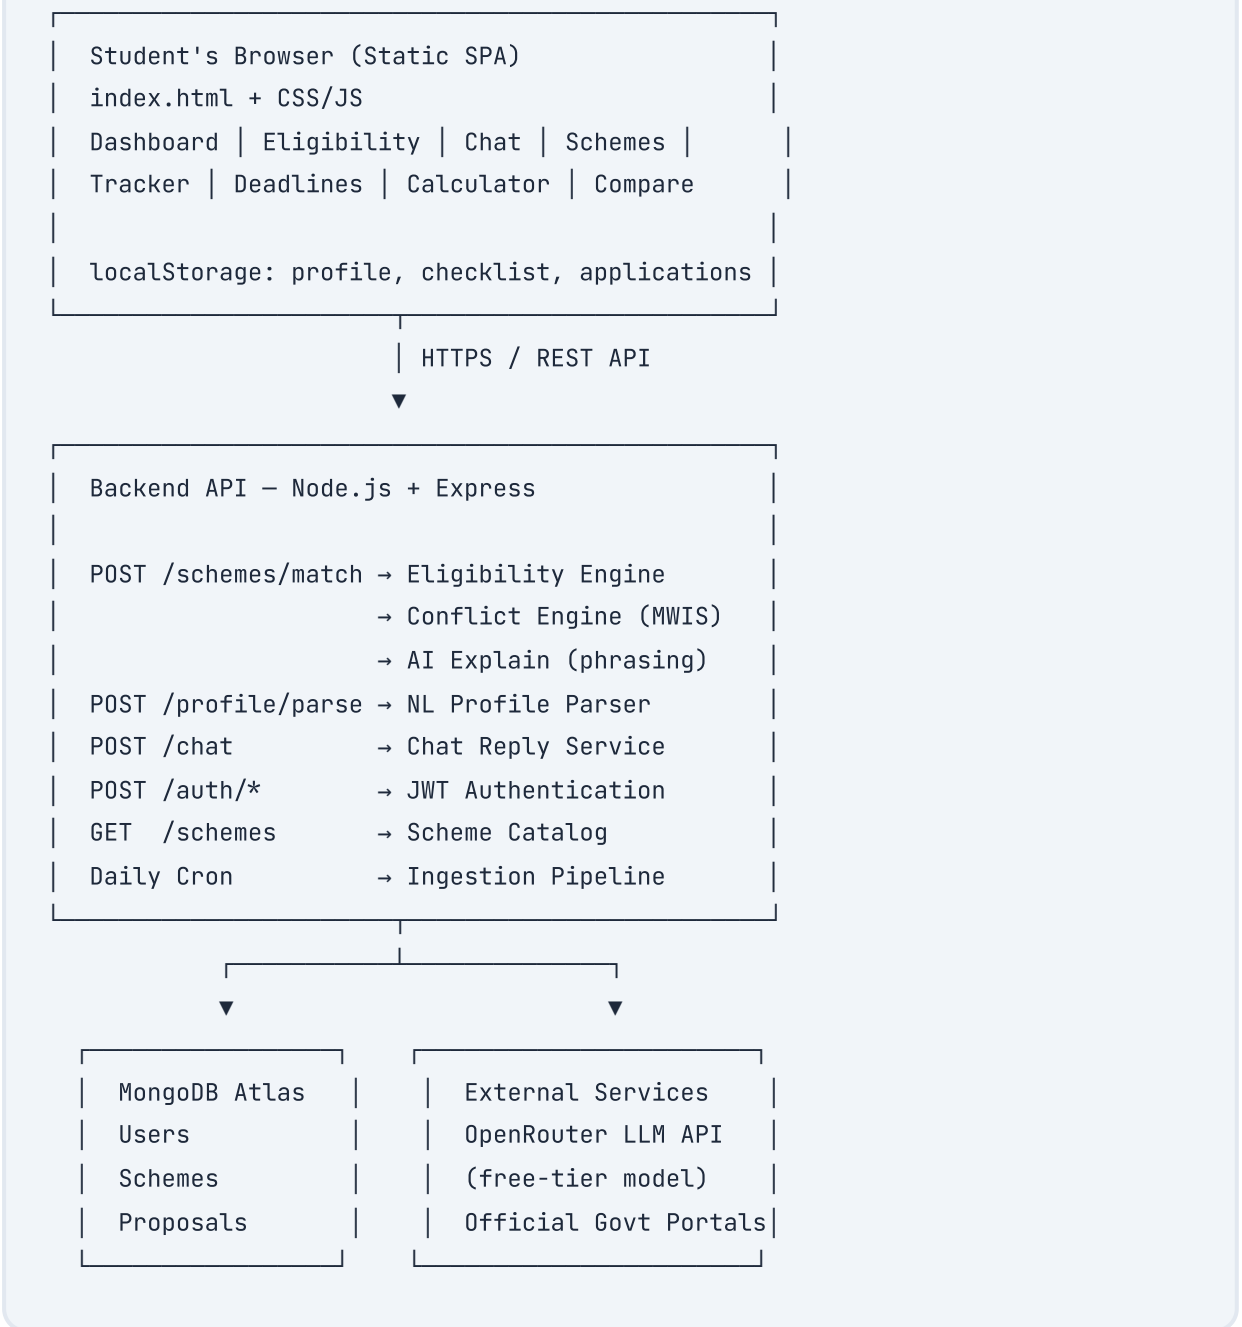

- ✅ Pudhumai Penn (₹12,000/yr)
- ✅ 7.5% Govt School Engineering Quota (Full Fee Waiver ~ ₹50,000)

⚠️ Excluded by Conflict:

TN BC Post-Matric: Can't combine with Pudhumai Penn — both cover same tuition fee benefit, and Pudhumai Penn pays more.

06 System Architecture

6.1 High-Level Design

6.2 Data Flow — Eligibility Evaluation

```
User fills form / types natural language
        │
        ▼
  UserProfile = { cat, edu, inc, gender, marks, state, stream... }
        │
        ▼
  POST /api/v1/schemes/match (or local fallback)
        │
        ├── scoreScheme() for EACH of 30+ schemes
        │     ├── Hard blocks? → score: 0, blocks: [reason]
        │     ├── Positive checks → score += points, reasons.push(...)
        │     └── Return { score, reasons, blocks }
        │
        ├── eligible = score ≥ 30 AND blocks.length === 0
        │
        ├── computeBestFit() → MWIS algorithm
        │     ├── Build conflict bitmasks
        │     ├── Find max-weight valid subset
        │     └── Track excluded schemes + reasons
        │
        ├── explainMatch() → AI phrasing (or template fallback)
        │
        ▼
  Response: { eligible[], bestCombo[], comboTotalValue,
              excludedByConflict[], explanation }
```

07 Tech Stack Breakdown

Frontend

TECHNOLOGY	PURPOSE
HTML5	Structure (single index.html — 79,691 bytes)
CSS3	9 modular stylesheets with design tokens
Vanilla JavaScript (ES6+)	14 JS modules, zero external dependencies
Google Fonts	Syne + Plus Jakarta Sans typography
localStorage / sessionStorage	Profile, checklist, tracker, navigation state
IntersectionObserver	Landing page scroll animations

Backend

TECHNOLOGY	PURPOSE
Node.js ≥ 18	Runtime environment
Express.js	REST API framework
MongoDB Atlas + Mongoose	Database + ODM
bcryptjs (12 rounds)	Password hashing
JWT (7-day expiry)	Stateless authentication
node-cron	Daily ingestion (03:00 server time)
Helmet + CORS	Security headers + cross-origin

AI / LLM Layer

TECHNOLOGY	PURPOSE
OpenRouter API	LLM access via free-tier model

nvidia/nemotron-3-ultra-550b	Default model (verified for clean JSON output)
4-5 second timeouts	Prevents UI blocking
Deterministic fallbacks	Template + regex replaces AI if unavailable

DevOps

TECHNOLOGY	PURPOSE
Vercel	Frontend static hosting with security headers
GitHub Actions	CI/CD workflows
Issue & PR Templates	Standardized contribution workflow

08 Scheme Database & Coverage

8.1 National Schemes (11 Schemes)

SCHEME	BODY	AMOUNT	TARGET
NSP Post-Matric Scholarship	Min. of Education	₹2K–₹25K/yr	OBC/SC/ST/EWS/Minority
Central Sector (PM-USP)	Min. of Education	₹12K–₹20K/yr	Top 12th graders
AICTE Pragati	AICTE	₹50,000/yr	Girls, technical courses
INSPIRE (DST)	Dept. of Science	₹80,000/yr	Top 1% science stream
CSIR-UGC NET JRF	UGC / CSIR	₹31K–₹37K/mo	NET-qualified researchers
Begum Hazrat Mahal	MAEF	₹5K–₹6K/yr	Minority girls, 9–12
PM Research Fellowship	Min. of Education	₹70K–₹80K/mo	PhD at IITs/IISc
AICTE Saksham	AICTE	₹50,000/yr	Differently-abled, tech
NSP Pre-Matric	Min. of Education	₹1K–₹5K/yr	Reserved, Class 9–10
Ishan Uday	UGC	₹5.4K–₹7.8K/mo	North-East only
PM-YASASVI	Min. Social Justice	₹75K–₹1.25L/yr	OBC/EBC/DNT

8.2 Tamil Nadu State Schemes (19 Schemes)

Sourced from official TN government portals: `tnadw.tn.gov.in`, `bcw.tn.gov.in`, `dte.tn.gov.in`

CATEGORY	SCHEMES
Adi Dravidar & Tribal Welfare (SC/ST)	Pre-Matric, Post-Matric School, Post-Matric UG/PG, CM Merit Cash Award

BC/MBC/DNC Welfare	Post-Matric School, Post-Matric UG/PG, First Generation Graduate
Women-Specific	Pudhumai Penn, 7.5% Govt School Engineering Quota
Minority Welfare	Minority Post-Matric Scholarship
Occupational Welfare	Construction Workers' Children Grant
Disability Welfare	Differently Abled Wards Grant
Research	TN Research Fellowship

8.3 Scheme Data Structure

```
{
  id: 'tn-adw-postmatric-ug',     // unique kebab-case ID
  name: 'TN Post-Matric (SC/ST)', // display name
  by: 'Adi Dravidar Welfare',     // issuing department
  amt: '₹12,000/yr',              // display amount
  amtNum: 12000,                   // numeric for optimization
  tags: ['SC/ST', 'UG/PG'],       // filter tags
  exclusiveGroup: 'tn-fee-reimbursement',  // conflict group
  conflictsWith: ['other-id'],     // explicit conflicts
  durationYears: 4,                // renewal tenure
  renewal: { minAttendance: 75, minMarks: 60 },
  verified: '2026-09-09',         // last verification
  confidence: 'medium',           // data confidence
  eligFn(u) { ... }               // deterministic eligibility function
}
```

09 AI Integration — Philosophy & Constraints

🚫 Critical Architecture Principle: AI ≠ Decision Maker

The AI **NEVER decides eligibility**. It is used strictly for two tasks:

1. **Profile Extraction** — parsing natural language into structured fields
2. **Explanation Phrasing** — making deterministic results human-readable

```
Student Natural Language → AI Profile Parser (extraction only)
                                ↓
                  Structured Profile {cat, edu, inc...}
                                ↓
                  Deterministic Rule Engine (eligFn) ← NO AI HERE
                                ↓
                  Match Results {eligible, bestCombo}
                                ↓
                  AI Explanation Layer (phrasing only) → Human-Readable Summary
```

9.1 Profile Parser Service

- **Dual-mode**: LLM extraction (primary) + regex/pattern-matching fallback (deterministic)
- Handles **all 28 Indian states + UTs** with city name → state mapping
- Recognizes **TN-specific categories** (BC, MBC, DNC — distinct from all-India OBC)
- Income detection from NL: "1.5 LPA", "below 1 lakh", "₹2,50,000"
- **Parent occupation detection**: government / construction / private
- **Missing field reporting** — tells caller which required fields couldn't be extracted

9.2 AI Explanation Service

- System prompt **explicitly forbids** adding/removing/changing any eligibility fact
- **4-second timeout** (not 15s) to prevent UI blocking
- Template fallback produces identical factual content with less polished phrasing

9.3 Hallucination Prevention Guarantees

❌ AI NEVER DOES	✅ AI ONLY DOES
See scheme rules or criteria	Extract what student **actually stated**
Output match/no-match decisions	Rephrase what deterministic engine **already decided**
Invent amounts, deadlines, documents	Structure free text into validated enum fields
Guess missing information	Report missing fields back to caller

10 Data Ingestion Pipeline

An automated pipeline that keeps scheme data fresh by re-checking official government portals:

```
SOURCES Registry (hand-vetted official URLs)
        ↓
  Fetch HTML (cheerio) / PDF (pdf-parse)
        ↓
  Extract Text Content
        ↓
  LLM Structuring (extraction-only prompt)
        ↓
  Confidence Assessment
        ├── HIGH → Auto-apply to live Scheme doc
        │          (allowlisted fields only)
        │          Status: 'approved', reviewer: 'auto-ingestion'
        │
        └── MEDIUM/LOW → Pending Proposal
                         for human review endpoint
        ↓
  SchemeChangeProposal (complete audit trail)
```

Safety Guarantees

PROTECTED FIELD	WHY
`eligFn`	Eligibility rules always hand-authored by developers
`amt` / `amtNum`	Financial figures require human verification
`verified` / `confidence`	Audit integrity must be preserved

Discovery Mode

Crawls `tn.gov.in/scheme_beneficiary_list.php` for new schemes → filters to education/scholarship → generates proposals. Caps at **10 new candidates per run** (politeness to source sites). Runs daily at **03:00 server time** via node-cron.

11 Security & Deployment

Security Headers

HEADER	VALUE
X-Content-Type-Options	`nosniff`
X-Frame-Options	`DENY`
X-XSS-Protection	`1; mode=block`
Referrer-Policy	`strict-origin-when-cross-origin`
Permissions-Policy	`camera=(), microphone=(), geolocation=()`

Offline Resilience

- Entire eligibility engine runs **client-side** — zero network dependency
- localStorage for all user data — works without backend
- Backend is optional enhancement, not a hard dependency
- Loads in **< 1 second on 3G** (zero framework bloat)

12 User Flow Walkthrough

Flow 1: First-Time Student Visit

```
1. Landing Page (hero animation, rotating words)
       ↓
2. Click "Check My Eligibility"
       ↓
3. 4-Step Onboarding Modal
   ├── Step 1: Name, Age, Gender
   ├── Step 2: State, Category
   ├── Step 3: Education, Stream, Marks
   └── Step 4: Income, Special status
       ↓
4. Dashboard loads → Top 3 matches shown
       ↓
5. Navigate to Eligibility Checker → Full results
       ↓
6. See Best-Fit Recommendation → Conflict-free bundle
       ↓
7. Click "Track" → Added to Kanban board
       ↓
8. Set deadline → Export .ics to calendar
```

Flow 2: AI-Assisted Quick Match

```
1. Open AI Chat
       ↓
2. Type: "I'm a girl from a TN government school,
   doing 1st year B.Tech, family income 1.2 LPA, BC"
       ↓
3. AI Parser extracts: gender=Female, state=Tamil Nadu,
   edu=ug-tech, inc=1to2.5, cat=BC
       ↓
4. Eligibility engine scores 30+ schemes in <50ms
       ↓
5. Conflict engine finds optimal combination
```

```
        ↓
6. Chat shows scheme cards with apply buttons + documents needed
```

13 Code Architecture — File-by-File

13.1 Frontend JavaScript Modules (14 files)

FILE	SIZE	PURPOSE
`chat.js`	119 KB	AI chat with guided flows, what-if analysis, scheme cards
`eligibility.js`	47 KB	Eligibility form UI, NL parsing, best-fit rendering
`tn-schemes.js`	30 KB	19 Tamil Nadu scheme definitions with eligFn
`eligibility-engine.js`	20 KB	11 National scheme definitions + scoring helpers
`panels.js`	15 KB	Scheme grid, deadlines, news, compare renderers
`state.js`	11 KB	App state, API calls, profile persistence, auth
`init.js`	8 KB	Boot sequence, animations, backend catalog sync
`tracker.js`	7 KB	Kanban board + .ics calendar export
`ui.js`	7 KB	Dashboard/checklist UI update functions
`conflict-engine.js`	6 KB	MWIS algorithm (client-side mirror)
`onboarding.js`	4 KB	4-step modal flow
`navigation.js`	4 KB	Page/panel routing + session retention
`auth.js`	3 KB	Register/login UI
`lang.js`	3 KB	Voice language selection

13.2 Backend Architecture

LAYER	FILES	PURPOSE
Routes (6)	auth, chat, ingestion, profile, schemes, user	URL → Controller mapping

Controllers (6)	auth, chat, ingestion, profile, schemes, user	Request handling, validation
Services (7+7)	eligibility, conflict, AI explain, chat reply, profile parser, OpenRouter client + 7 ingestion files	Business logic
Models (3)	Scheme, SchemeChangeProposal, User	Mongoose schemas
Data (4)	nationalSchemes, tnSchemes, compatibilityRules, schemeDeadlines	Static datasets + rules

13.3 Test Coverage

TEST FILE	TESTS
`eligibilityEngine.test.js`	Scheme scoring accuracy across profile types
`conflictEngine.test.js`	MWIS algorithm correctness
`compatibilityRules.test.js`	Pairwise compatibility status checks
`chatReply.test.js`	Chat response generation
`chat.test.js` (frontend)	Frontend chat logic
`checklist.test.js` (frontend)	Checklist persistence

14 REST API Reference

METHOD	ENDPOINT	PURPOSE
POST	`/api/v1/auth/register`	Create user account
POST	`/api/v1/auth/login`	Login → returns JWT token
GET	`/api/v1/schemes`	List all schemes (optional `?type=` filter)
GET	`/api/v1/schemes/:id`	Get single scheme details
POST	`/api/v1/schemes/match`	**Core:** Eligibility + conflict-aware best-fit
POST	`/api/v1/profile/parse`	Natural language → structured profile
POST	`/api/v1/chat`	AI chat reply
GET	`/api/v1/user/profile`	Read user profile (auth required)
PUT	`/api/v1/user/profile`	Update user profile (auth required)
POST	`/api/v1/ingestion/run`	Manual ingestion trigger
GET	`/api/v1/ingestion/proposals`	List change proposals
PUT	`/api/v1/ingestion/proposals/:id`	Approve/reject proposal
GET	`/health`	Health check endpoint

15 Impact Metrics & Competitive Analysis

0	₹62K	<50ms	<1s
DOUBLE-DIPPING REJECTIONS	SAMPLE ANNUAL AID	PROCESSING TIME	LOAD ON 3G

Competitive Analysis

FEATURE	SCHEMEMATCH	GOVT PORTAL	OTHER PROJECTS
Conflict detection	✅ MWIS	❌ None	❌ None
Optimal combination	✅ Max-value	❌ Flat list	❌ Flat list
Natural language input	✅ AI + regex	❌ Forms	⚠️ AI only
Offline capability	✅ 100%	❌ Server	❌ API
TN-specific categories	✅ BC/MBC/DNC	⚠️ OBC only	❌ None
Data freshness pipeline	✅ Auto-ingest	❌ Manual	❌ Static
Audit trail	✅ Full	❌ None	❌ None

> For a first-generation college student from rural Tamil Nadu with family income ₹1.2 LPA, SchemeMatch can identify **₹62,000/year** in guaranteed aid — potentially the difference between attending college and dropping out.

16 Future Roadmap

Stage 2 (In Progress)

FEATURE	STATUS
Node.js + Express backend	✅ Done
MongoDB Atlas integration	✅ Done
JWT authentication	✅ Done
AI-powered profile parsing	✅ Done
Conflict-aware best-fit API	✅ Done
Data ingestion pipeline	✅ Done
React 18 + Vite migration	➡ SOON Planned

Stage 3 (Future)

- Ministry of Social Justice schemes (~15 new)
- Ministry of Minority Affairs schemes (~8 new)
- Expand to Karnataka, Maharashtra, Kerala
- Official NSP data-sharing partnership
- Vernacular language support (Tamil, Hindi, Telugu)
- SMS/WhatsApp notification for deadlines
